2 - Setting up Loghi with Docker

What is Docker?

- open-source platform
- build and manage *containers*

What is Docker?

- open-source platform
- build and manage *containers*

What are Containers?

- predefined environments
- contain everything that is needed to run a tool/software
- easy to share, "recipes"

Opening a Terminal

Linux/Mac:

Open a Terminal

Windows:

- PowerShell or Command Prompt
- type: bash
- *first time opening WSL: create username and password*

Reminder: Shell Cheat-Sheet

Command	Description
ls	list directory contents
pwd	print working directory (i.e. current location)
cd \<target\>	change directory location to \<target\>
mv \<source\> \<target\>	move \<source\> to \<target\>

Downloading Loghi

```
docker pull loghi/docker.laypa

docker pull loghi/docker.htr

docker pull loghi/docker.loghi-tooling
```

Collecting all the paths
